CEDAR POINT HEALTH

Notice of Artificial Intelligence (AI) Use in Our Healthcare Facilities

At Cedar Point Health, we are committed to transparency, innovation, and the highest standard of patient care. In alignment with **Colorado Senate Bill 24-205**, we are providing notice that we utilize **artificial intelligence (AI)** technologies to support clinical and operational functions. These tools are designed to enhance—*not replace*—the work of our dedicated healthcare professionals.

How We Use AI

1. **Patient Scheduling Assistance**
   We use AI-powered tools to help our scheduling team efficiently locate open appointment times with your provider. This allows us to respond to calls faster and reduce delays in care coordination.

2. **Medical Documentation Support**
   Some of our providers use AI ambient listening tools to assist in drafting medical notes during patient visits. These systems help reduce time spent on documentation, allowing providers to focus more fully on you during your visit.

3. **Clinical Information Navigation**
   To stay informed on the latest research and evidence-based practices, our providers may use AI tools—such as ChatGPT, Deep Research, and OpenEvidence—to help rapidly identify and interpret relevant medical literature.

Our Commitment to Human Oversight

While AI assists in these processes, **every output generated by AI is reviewed and validated by a human team member**. Whether it's a note in your chart or a schedule confirmation, your care is always guided by **human attention, judgment, and accountability**.

We believe AI, when used responsibly, can support our mission to provide compassionate, timely, and evidence-informed care. If you have questions about our use of AI, please don't hesitate to contact us.

Thank you for trusting us with your care.
